

KaleidaCare Solutions

KaleidaCare University

KaleidaCare Solutions offers a comprehensive suite of training and education opportunities available through KaleidaCare University. KaleidaCare University is an all inclusive Learning Management System (LMS) that is your agency's complete training resource to manage employee training, course development and educational tracking.

KaleidaCare University offers your staff hundreds of previously created online courses that can help your organization meet mandated staff safety, licensing and compliance training requirements. In addition, your agency will be able to create your own trainings online, incorporate the trainings that your agency already uses, and update trainings with ease.

KaleidaCare University offers your agency:

- **Web-based Accessibility**- KaleidaCare University can be accessed anywhere through the Internet. Trainings can be done when your staff has time to concentrate on learning and are not tied to specific timeframes.
- **Easy Access** - your staff will be able to access KaleidaCare University directly through KaleidaCare Solutions without need to login to another site
- **Configurability** - your agency can create its own Web learning portal with a full featured Learning Management System to support accreditation efforts, gain staff CEUs and aid New Hire Trainings.
- **Course Tracking** - provides the ability for staff to track their own training, and for your agency to monitor and audit trainings at all levels
- **Course Library** - when the system is turned on, your agency has access to hundreds of training courses.
- **Testing** - Each course is complete with a final test that accurately assesses the user's comprehension of training.

KaleidaCare University includes the following key features:

- **Professional Development Planner (PDP)** which allows administrative users to build and assign performance plans to individuals, positions or departments.
- **Articulate Presenter** lets non-technical users create rich-media presentations by integrating narration and interactivity with a standard PowerPoint file.
- **Web-Interpoint** enables users to share presentations, applications, web content and documents online - anytime, anywhere.
- **Reporting and Graphing capability** allows users to have access to certain students' records to monitor their training progress.
- **Email Alerts** are available and easy to set up. These **email alerts** are stored in the LMS inbox for the learner to access when they do not have access to email.
- **Personalized Course Catalogue** gives learners the ability to search, access and self-assign both online and classroom course. The administrator determines which courses are self-assignable. If a learner signs up for a classroom course, both the learner and the supervisor are notified via email of the registration.
- **Supervisor Access** allows supervisors to be given privileges to create courses, learner profiles and view reports for only the people they supervise. The system automatically assigns a learner to the supervisor's 'view' as soon as that person is assigned to the department and attached to that supervisor.
